

MODIS Calibration Group

The Cal group met with Masakatsu Nakajima from NASDA and Toshiyoshi Kimura from Fujitsu on Thursday afternoon to discuss GLI and MODIS calibration issues and “lessons learned”.

We did not discuss planned calibration exercises as Phil Slater is discussing cooperative calibration exercises with the ASTER team this week in Japan.

The group did not have a meeting prior to the Science Team meeting as MCST has started a series of three reviews at team member sites. The first was last week at Wisconsin. There will be two more reviews: University of Miami and University of Arizona. We encourage other team members to attend these reviews or the final review at GSFC (18 and 19 Dec 95).
